

# SPARKNET

SparkNet is the largest wireless network in Finland. SparkNet enables easy and affordable network connection for mobile users.

SparkNet has a wide product portfolio for building guest networks. This portfolio covers different needs for different business environments. There are cost effective solutions for small environments like cafes, while enterprise solutions scale to be used in large companies having offices in multiple locations.

User management solutions enable easy generation and deployment of guest accounts. User management can also be integrated with existing user management solutions in the enterprise.

## SparkNet Enterprise

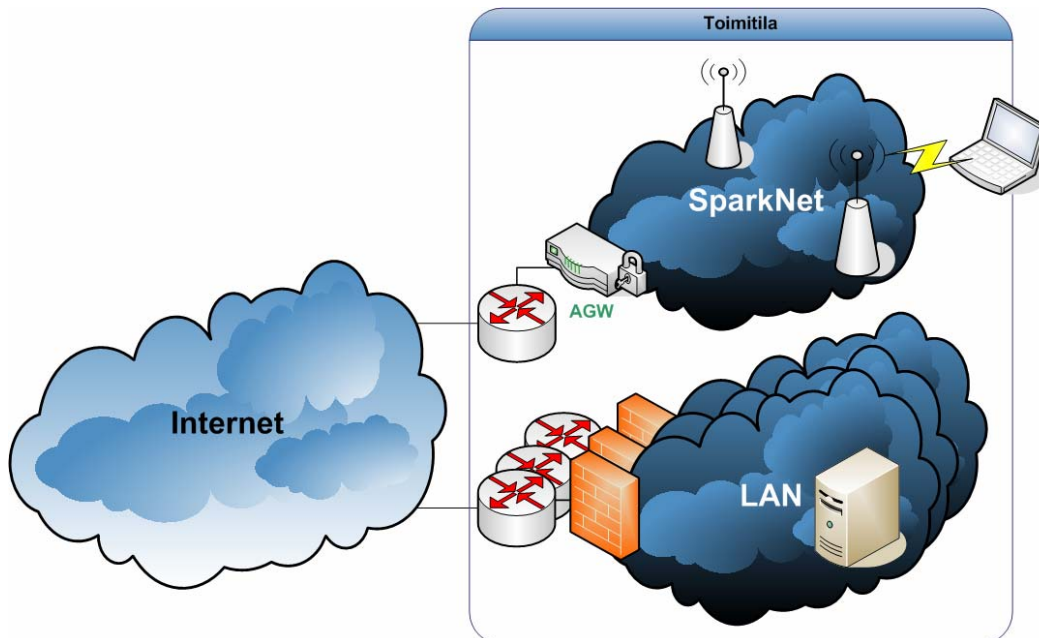

The SparkNet Enterprise solution is the most scalable solution designed for use in large Enterprises. This solution is targeted to WAN environments for enterprises with offices in multiple locations. The solution may be based on the use of VLAN technology and already existing Internet connection.

### Deployment of the Enterprise solution

Our specialists design deployment together with the customer who specifies coverage areas during the design phase. The customer receives an offer according to the deployment plan.

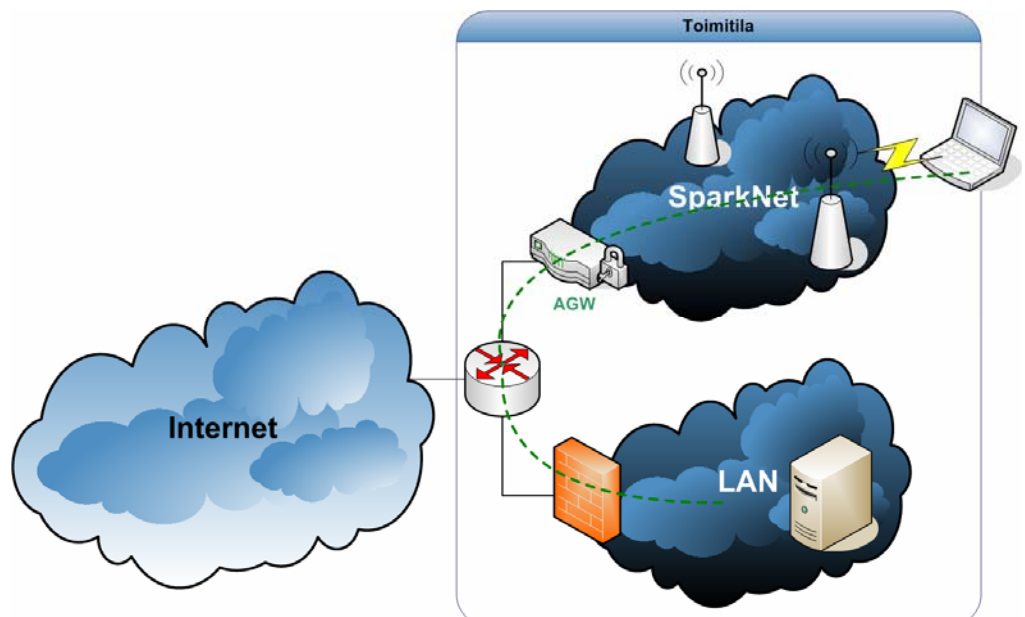

The SparkNet Business Center solution is designed for environments where several companies are located in same building. "office hotels" and large office buildings are ideal deployment areas for the Business Center solution.

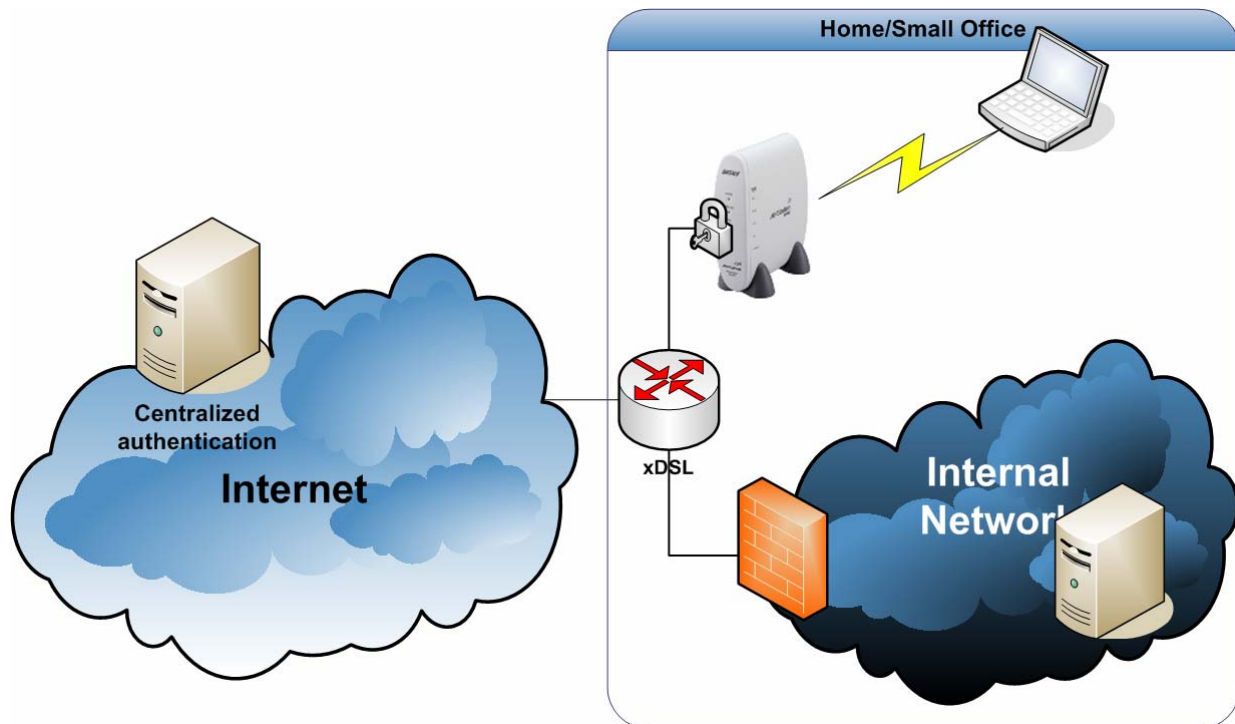

## SparkNet Business Solution

The SparkNet Business Solution is a scalable model for small and medium size companies. Solution is based on the reuse of network resources, thus exploiting investments already made. No separate Internet connection is needed since the existing connection can be utilized.

SparkNet SOHO is a wireless solution for small offices and home users. This model is also based on the use of available network resources and thus no separate Internet connection is needed.

## Open SparkNet

OpenSpark is a Wi-Fi user community developed and maintained by MP-MasterPlanet Ltd. You join the OpenSpark community by letting other community members use your wireless access point. You get one OpenSpark user account when you join the community. The OpenSpark user account can be used to access Internet through all OpenSpark access points. Also all SparkNet accounts are valid in the OpenSpark community. By joining the OpenSpark community you get a bonus discount on SparkNet accounts.
